

JAVA PROGRAM TO PRINT ODD AND EVEN NUMBERS IN AN ARRAY

AIM

To write a Java program that prints the odd and even numbers in an array.

APPARATUS REQUIRED

- Computer
 - Eclipse IDE
-

THEORY

Java is a high-level, class-based, object-oriented programming language designed to have minimal implementation dependencies. It follows the principle of *Write Once, Run Anywhere* (WORA), meaning compiled Java code can run on any platform that supports Java without recompilation.

Java applications are compiled into **bytecode**, which runs on the **Java Virtual Machine (JVM)** regardless of the underlying hardware or operating system. Its syntax is similar to C and C++, but Java provides automatic memory management and fewer low-level facilities.

Java remains one of the most popular programming languages, particularly for client–server web applications, and is widely used due to its platform independence, security, and scalability.

PROCEDURE

1. Launch Eclipse IDE

- Open Eclipse.
- Select a workspace (folder to save projects).

2. Create a New Project

- Go to **File > New > Java Project**.
- Enter the project name.
- Click **Finish**.

3. Create a New Class

- Right-click on the package → **New > Class**.
- Enter the class name (e.g., **SeparateOddEven**).
- Select **public static void main(String[] args)**.
- Click **Finish**.

4. Write the Program

- Type or paste the source code in the editor.

5. Save the Program

- Press **Ctrl + S** or go to **File > Save**.

6. Compile and Run the Program

- Click the **Run button** (green ▶) on the toolbar.
- View output in the **Console window**.

7. Close Eclipse

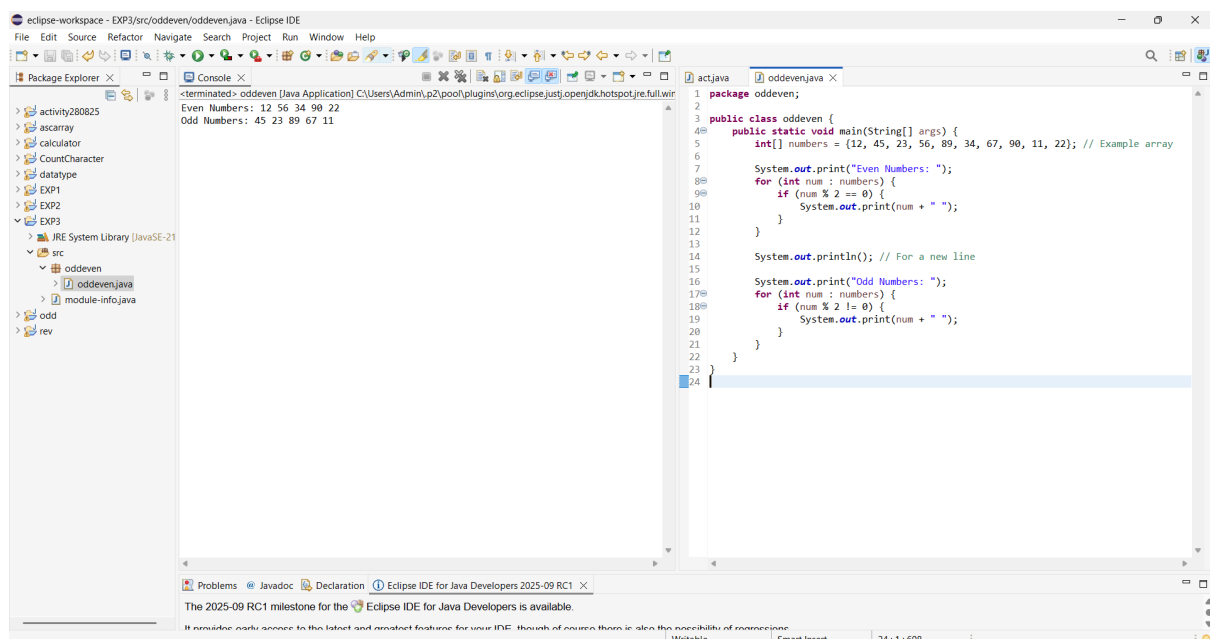

- After finishing, click **File > Exit**.

PROGRAM

```
package oddeven;

public class oddeven {
    public static void main(String[] args) {
        int[] numbers = {12, 45, 23, 56, 89, 34, 67, 90, 11, 22}; // Example
array
        System.out.print("Even Numbers: ");
        for (int num : numbers) {
            if (num % 2 == 0) {
                System.out.print(num + " ");
            }
        }
        System.out.println(); // For a new line
        System.out.print("Odd Numbers: ");
        for (int num : numbers) {
            if (num % 2 != 0) {
                System.out.print(num + " ");
            }
        }
    }
}
```

OUTPUT

RESULT

Thus, the Java program to print odd and even numbers from an array was successfully executed and the output was verified.
